

RHOSS

cliente è assicurato dal potenziamento dell'area pre e post vendita, in grado di dare una risposta immediata alle richieste degli utenti finali e dei centri assistenza convenzionati.

The **IRSAP -RHOSS** group is now one of the most important Italian protagonists in the heating and air conditioning sectors.

Our production plants cover a service area measuring 120,000 sq.m in Rovigo and Codroipo (Udine), Italy, in Cluj Napoca, Rumania and in Peking, China.

The group also has commercial branches in France, Spain and Germany.

Thanks to its extensive marketing network as well as its pre and post sales customer service, the group is present throughout the Italian and international markets. Products manufactured by the IRSAP group are distributed throughout Europe, Eastern Countries, the Far East, North Africa, Central and Southern America.

IRSAP was founded in 1963 for the production of pressed and tubular steel radiators. In 1982, IRSAP launched the first towel warmer radiators to be manufactured in Italy.

IRSAP introduced an innovative conception of the radiator to the market, intended not only as a heating element but also as an interior design component with enhanced shapes, colours and functions; this new concept inspired the "I TERMOARREDATORI®" trademark.

Thanks to the on-going development of the range, the quest for up-to-date colours and the numerous available sizes, there are over 500,000 different possibilities to choose from; IRSAP radiators are able to meet any customer demand: for truly tailor-made heat.

With the "OFFICINA DELLE IDEE" trademark, IRSAP puts forward new exclusive design radiators, in line with interior design trends, dedicated to a demanding public, attentive to detail.

RHOSS was established in Codroipo in 1968. Specialised in the design, manufacture and sale of heating and cooling assemblies for civil, residential and industrial air conditioning, RHOSS is among the leaders on the Italian market, and it is enjoying substantial expansion on the international market.

Thanks to over forty years' experience in the sector, RHOSS not only supplies a vast and complete product range, but also innovative system solutions that meet the most exacting demands of the market.

The RHOSS catalogue offers more than 500 models for every system requirement: hydronic systems from 2 kW to 1,500 kW, terminal units from 100 m³/h to 150,000 m³/h, a split-system range from 2 kW to 35 kW, and a rooftop range from 30 kW to 150 kW.

The futuristic RHOSS R&D laboratory is one of the largest in Europe, guaranteeing constant control of every unit produced featuring up to 1,500 kW of power and the most extreme and varied climate conditions.

Improved customer service is guaranteed thanks to the consolidation of our pre and post sales service, capable of providing an answer in real time to the demands of our end users and authorised service centres.
